

Question

1) secure individual-level data or 2) aggregated tables, depending on disclosure of small numbers and data extraction cost involved, for anaphylaxis hospital admissions, with information on injuries, lack of administration, late administration and associated hospital costs for the period 1 April 2015 – 31 March 2025, as specified in the attached data specification.

Based on the attached tentative proposal, if you can kindly give me estimates of data extraction cost and timelines for 1 and 2 please.

Please can you advise if I should be using HRG and not PLICS for comparing UK nations. If PLICS might be beneficial in this, please can you advise the benefits and drawbacks. If PLICS / local cost data are not available for some providers, please indicate which providers and supply HRG at spell level as an alternative.

If you can also advise on Datix / NRLS / PSIMS for injuries, lack of administration, late administration please

Response

The Department does not hold the information in the requested format.

Date response issued: 17/2/2026
