READER INFORMATION

Accessible version	This is an accessible version of the publication “Healthy Child, Healthy Future: Health Review Statistics for Northern Ireland 2025/26”.
Authors:	Deborah Kinghan-Adams and Gary McCracken
Publication Date	29 October 2026
Issued by	Community Information Branch Information & Analysis Directorate Department of Health Stormont Estate Belfast, BT4 3SQ, Northern Ireland Tel (028) 90529494 Email cib@health-ni.gov.uk Web Information Analysis Directorate
Target Audience	Health Visitors, Directors of Nursing, Directors of Children’s Services, Chief Executives of HSC Board, PHA and Trusts in Northern Ireland.
Purpose	Data from this report is used to monitor the delivery of services to children, to help assess Health and Social Care (HSC) Trust performance, corporate monitoring, to inform and monitor related policy, and to respond to parliamentary/assembly questions.
User Feedback	We welcome your feedback. If you have any comments on this publication, please contact Community Information Branch cib@health-ni.gov.uk .
Copyright	This publication is Crown copyright and may be reproduced free of charge in any format or medium. Any material used must be acknowledged, and the title of the publication specified.
Price	Free

THE PRODUCER OF THESE STATISTICS

Information Analysis Directorate

Statistics and research for the **Department of Health** is provided by the Information and Analysis Directorate (IAD). IAD is responsible for compiling, processing, analysing, interpreting and disseminating a wide range of statistics covering health and social care.

The statisticians within IAD are out posted from the Northern Ireland Statistics & Research Agency (NISRA) and the statistics are produced in accordance with the principles and protocols set out in the [Code of Practice for Official Statistics](#).

IAD comprises five statistical sections: Hospital Activity Information, Hospital Waits Information Community Information, Public Health Information & Research and Project Support Analysis.

This report is produced by Community Information Branch.

Community Information Branch

The purpose of Community Information Branch (CIB) is to promote effective decision making in children and adult social services and community health by providing quality information and analysis.

We collect, analyse and publish a wide range of community information that is used to help monitor the delivery of personal social services policy. Information collected by CIB is used to assess HSC Trust performance, for corporate monitoring, policy evaluation, and to respond to parliamentary/assembly questions.

Information is widely disseminated through a number of regular key statistical publications and ad hoc reports, details of which are available online.

[Information Analysis Directorate web link](#)

Our Vision and Values

- Provide up-to-date, quality information on children and adult social services and community health;
- To disseminate findings widely with a view to stimulating debate, promoting effective decision-making and improvement in service provision; and
- Be an expert voice on health and social care information.

BACKGROUND

Child Health Promotion Programme

[Healthy Child, Healthy Future \(HCHF\)](#) is a framework for the universal Child Health Promotion Programme within Northern Ireland. It is recognised as being central to improving child health across a range of issues and giving every child and young person the best start in life.

Effective implementation of the programme will lead to:

- Strong parent-child attachments resulting in better social and emotional well being;
- Care that keeps a child healthy and safe;
- Early detection of and actions to address developmental delay, abnormalities, ill health and concerns about safety;
- Identification of factors that could influence health and well being in families;
- Increased rates of breast feeding;
- Early recognition of growth disorders and risk factors for obesity;
- Healthy eating and increased activity leading to a reduction in obesity;
- Prevention of serious and communicable diseases;
- Better short and long term outcomes for children at risk of social exclusion;
- Increased learning and readiness for school.

In order to meet these goals, the framework sets out a programme of child health reviews that every family can expect. This statistical bulletin details the number of preschool health reviews completed within the recommended timeframe (on time), outside the recommended timeframe (both earlier and later) and the number that were not completed¹.

Please note that this publication does not cover the reasons why reviews did not take place. In some instances, it may be based on parents' wishes. Furthermore, the reports these figures are taken from are based on individual HSC Trust's Child Health Systems. If a child had its review in one HSC Trust and subsequently moved to another HSC Trust, the review may not be recorded on the IT system of the latter HSC Trust, and as such will be on the report as 'Not seen'. This is a recording issue for all the HCHF reviews, but is in particular relevant for the 2-2 ½ review as it can take place over an 8 month period.

The refreshed Healthy Child Healthy Future framework was published in September 2025 [Healthy Child Healthy Future | Department of Health](#). A phased implementation plan has yet

¹ This publication does not cover Antenatal visits, 3 Year Contact information, or the 4 Year Record Review.

to be developed. Whilst some enhancements can be delivered within existing resources, others will require additional targeted investment to ensure effective delivery and long-term sustainability. The framework sets out the planned rollout of child health reviews over the coming years.

Table 1. Recommended timeframe of different Health Visitor reviews in Northern Ireland (Healthy Child Healthy Future 2010).

Source: Healthy Child Healthy Future 2010.

Health Visitor Reviews	Timeframe
New baby review /First Visit	10 – 14 days
6 – 8 week review	6 – 11 weeks
14 – 16 week health review	14 – 19 weeks
6 – 9 month contact	26 – 42 weeks
Health review at 1 year	52 – 60 weeks
Health review at 2 – 2 ½ years	104 – 140 weeks

Future versions of this publication may be based on the refreshed 2025 Healthy Child Healthy Future framework, however, for 2025/26 the information follows the timeframe set out in the 2010 framework.

SUMARY STATISTICS

During 2025/26, Health Visitors were expected to have completed 110,021 reviews of children across Northern Ireland².

- Some 97,646 of these (89%) were completed within the recommended time frame (contact on time).
- An additional 7% (7,970) were completed, but outside the recommended time frame (contact early or late).
- Some 4% of the reviews did not take place.

Figure 1. Percentage of health reviews completed by timing of the contact (2025/26)

The number of reviews undertaken – both on time and in total, was lower than the previous year. However, the percentage of on time contact during 2025/26 (89%) was higher than 2024/25 (87%). During 2025/26 4% of the reviews were not completed, unchanged in comparison to 2024/25.

Service delivery within Public Health Nursing has been periodically affected by workforce pressures in recent years. These factors should be considered when interpreting the following data.

² These figures exclude Antenatal Visits, 3 Year Contact and the 4 Year Record Review.

NEW BABY REVIEW / FIRST VISIT

The new baby review/first visit is to be carried out between day 10 and day 14 post birth.

In the year ending 31 March 2026, some 93% of all reviews were completed within the accepted timeframe, and 98% of reviews were completed in total (Table 2). The Southern and Northern HSC Trusts had the largest proportion of reviews take place within 10 - 14 days (94%). Please note that if a child is in neonatal unit or if the mother is in hospital during day 10-14, the first visit cannot take place and will be recorded as “Not seen”. Currently, it is not possible to exclude these children from the reports presented here and this should be borne in mind when analysing these figures.

Table 2. Percentage of new baby reviews/first visits completed during 2025/26

Timing	Proportion
Early contact (before day 10)	1%
On time contact (day 10 – 14)	93%
Late contact (after day 14)	5%
Not seen	2%
Children in cohort	17,894

Figure 2. Percentage of new baby reviews completed by HSC Trust (2025/26)

Figure 3. Percentage of new baby reviews completed on time by quarter (2015/16 - 2025/26)

The proportion of new baby reviews completed within the expected timeframe has slowly increased since 2015/16 with a slight dip seen in the first quarter of 2020/21, the beginning of the Covid-19 pandemic. The numbers have since returned to pre-pandemic levels (Figure 3).

6 – 8 WEEK REVIEW

The 6 – 8 week review is to be carried out between 6 and 8 weeks post birth; however, up to week 11 is acceptable.

In the year ending 31 March 2026, some 94% of all reviews were completed within the accepted timeframe, and 97% of reviews were completed in total (Table 3). The Northern HSC Trust had the largest proportion of reviews take place on time (95%).

Table 3. Percentage of 6 – 8 week reviews completed during 2025/26

Timing	Proportion
Early contact (before week 6)	3%
On time contact (week 6 – 11)	94%
Late contact (after week 11)	1%
Not seen	3%
Children in cohort	18,024

Figure 4. Percentage of 6 – 8 week reviews completed by HSC Trust (2025/26)

Figure 5. Percentage of 6 – 8 week reviews completed on time by quarter (2015/16 - 2025/26)

The proportion of 6 – 8 Week Reviews completed within the expected timeframe have remained relatively stable since 2015/16. Furthermore, when including contacts made early or late, this review has consistently had a very high coverage. A dip was seen in the first quarter of 2020/21, the beginning of the Covid-19 pandemic. The numbers have since returned to pre-pandemic levels (Figure 5).

14 – 16 WEEK HEALTH REVIEW

The 14 – 16 week health review is to be carried out between 14 and 16 weeks post birth; however, up to week 19 is acceptable.

In the year ending 31 March 2026, some 91% of all reviews were completed within the accepted timeframe, and 97% of reviews were completed in total (Table 4). The Northern, Southern and Western HSC Trusts had the largest proportion of reviews take place on time (92%).

Table 4. Percentage of 14 – 16 week health reviews completed during 2025/26

Timing	Proportion
Early contact (before week 14)	3%
On time contact (week 14 – 19)	91%
Late contact (after week 19)	2%
Not seen	3%
Children in cohort	18,110

Figure 6. Percentage of 14 – 16 week reviews completed by HSC Trust (2025/26)

Figure 7. Percentage of 14 – 16 week reviews completed on time by quarter (2015/16 - 2025/26)

The proportion of 14 – 16 Week Health Reviews undertaken within the accepted timeframe has had a slow increase since 2015/16. A dip was seen in the first quarter of 2020/21, the beginning of the Covid-19 pandemic. The numbers have since returned to pre-pandemic levels (Figure 7).

6 – 9 MONTH CONTACT

The 6 – 9 month contact is to be carried out between 6 and 9 months post birth; however, up to month 10 is acceptable.

In the year ending 31 March 2026, some 93% of all reviews were completed within the accepted timeframe, and 95% of reviews were completed in total (Table 5). The Southern and Western HSC Trusts had the largest proportion of reviews take place on time (94%).

Table 5. Percentage of 6 – 9 month contacts completed during 2025/26

Timing	Proportion
Early contact (before month 6)	1%
On time contact (month 6 – 10)	93%
Late contact (after month 10)	1%
Not seen	5%
Children in cohort	18,225

Figure 8. Percentage of 6 – 9 month contacts completed by HSC Trust (2025/26)

Figure 9. Percentage of 6 – 9 month contacts completed on time by quarter (2015/16 - 2025/26)

From 2015/16 to 2019/20, there was a year-on-year increase in the proportion of 6 – 9 month contacts undertaken on time. There was a large reduction in the percentage of completed contacts in the first two quarters of 2020/21, the beginning of the Covid-19 pandemic. The numbers have since returned to, and increased, from pre-pandemic levels (Figure 9).

1 YEAR HEALTH REVIEW

The 1 year health review is to be carried out 1 year post birth; however, up to month 14 is acceptable.

In the year ending 31 March 2025, some 72% of all reviews were completed within the accepted timeframe, and 94% of reviews were completed in total (Table 6). The Western HSC Trust had the largest proportion of reviews take place on time (84%).

Table 6. Percentage of 1 year health reviews completed during 2025/26

Timing	Proportion
Early contact (before month 12)	3%
On time contact (month 12 – 14)	72%
Late contact (after month 14)	19%
Not seen	6%
Children in cohort	18,384

Figure 10. Percentage 1 year reviews completed by HSC Trust (2025/26)

Figure 11. Percentage of 1 year reviews completed on time by quarter (2015/16 - 2025/26)

As a result of workforce pressures, the Public Health Agency has previously issued interim measure guidance to HSC Trusts that the 1 Year contact could be omitted under specific circumstances. There was a large reduction in the percentage of completed contacts from the end of 2019/20, likely to be a result of these interim measures, as well as the Covid-19 pandemic (Figure 11). Interim measures have since been stood down, and the percentage of contacts undertaken on time rose from 59% to 75% between 2023/24 and 2025/26. The figures for all contacts undertaken (early, on time or late) increased from 85% to 94%.

2 – 2 ½ YEARS HEALTH REVIEW

The 2 – 2 ½ years health review is to be carried out between 2 and 2 ½ years post birth; however, up to 2 years 8 months is acceptable.

In the year ending 31 March 2026, some 90% of all reviews were completed within the accepted timeframe, and 94% of reviews were completed in total (Table 7). The Western HSC Trust had the largest proportion of reviews take place on time (92%). Please note that the reports these figures are taken from are based on the individual Trusts' Child Health Systems. If a child had its review in one HSC Trust and subsequently moved to another HSC Trust, the review may not be recorded on the IT system of the latter Trust, and as such be recorded as 'Not seen', despite having had the review. This is a recording issue for all the different HCHF reviews, but is in particular relevant for the 2-2 ½ review as it can take place over an 8 month period. This should be borne in mind when analysing the figures presented here.

Table 7. Percentage of 2 – 2 ½ years health reviews completed during 2025/26

Timing	Proportion
Early contact (before 2 years)	2%
On time contact (2 years – 2 years 8 months)	90%
Late contact (after 2 years 8 months)	3%
Not seen	6%
Children in cohort	19,384

Figure 12. Percentage 2 – 2 ½ year health reviews completed by HSC Trust (2025/26)

Figure 13. Percentage of 2 – 2 ½ year health reviews completed on time by quarter (2015/16 - 2025/26)

Following a general increase in the proportion of 2 – 2½ year Health Reviews completed on time from 2015/16 to 2019/20, 2020/21 saw a large dip at the beginning of the Covid-19 pandemic. From 2021/22 there has been a steady rise with the percentage now being above pre-pandemic levels (Figure 13).

APPENDIX A – TABLES

Table 8. Summary Health Visits 2025/26 (Number)

APPENDIX B – PURPOSE OF EACH REVIEW

New Baby Review / First Visit

- Check Vitamin K status;
- Maintain infant health;
- Health promotion;
- Growth;
- Assess maternal mental health;
- Promote sensitive parenting;
- Identify and review risk factors;
- Assess promote and support infant feeding;
- Promote development of parent-baby relationship;
- Safeguarding – awareness of accident prevention;
- Establish newborn baseline clinical assessment.

6 – 8 Week Review

- Review and update family health assessment;
- Promote the uptake of immunisations;
- Reassess Maternal Mental Health;
- Monitor the infants growth;
- Prevention of Sudden Unexpected Death in Infancy (SUDI);
- Record feeding status;
- Delivery of Key health promotion messages;
- Review and update risk factors.

14 – 16 Week Health Review

- Review and update family health assessment;
- Review and update risk factors;
- Assess maternal mental health;

- Record infants feeding status;
- Monitor infants growth;
- Promote the uptake of immunisations;
- DDH age appropriate exam;
- Encourage uptake from other services e.g. Surestart.

6 – 9 Month Contact

- Home safety;
- Introduce the Book start pack;
- Bath-book-bed routine;
- Record feeding status;
- Accident prevention;
- Promote the uptake of immunisations;
- Provide health information.

1 Year Health Review

- Review and update of family health assessment;
- Record feeding status;
- Monitor growth;
- Review speech and language development;
- Promote oral health – dental registration;
- Offer parenting support;
- Health Promotion.

2 – 2 ½ Years Health Review

- Review and update risk factors;
- Monitor the infants growth;
- Monitor child's social, emotional, speech and behavioural development;
- Monitor vision and hearing ;
- Offer guidance on behaviour management;
- Promote language development;

- Toilet training;
- Safeguarding.

APPENDIX C – TECHNICAL NOTES

Purpose

This publication has been produced to measure the rate of completed child health contacts / reviews carried out by Health Visitors. Further information about these contacts and their purpose can be found in [‘Healthy Child, Healthy Future’](#).

Health Visitors and Health Reviews

Health Visitors are qualified nurses who have taken further training in Community & Child Health. Health Visitors work with individuals, families and groups whilst liaising closely with midwives, practice nurses and GPs.

A health review will take place in the family home, however can, for some type of contacts, also take place in a health centre and/or in a group setting.

Data Collection

The figures in this publication detail the number of preschool health reviews that should have been completed by the quarter end. It is recommended in ‘Healthy Child, Healthy Future’ that each health review should be completed within a certain time period; figures are reported on contacts that were completed early, within the recommended time period (on time), late or not completed. Figures are presented regionally and by Health and Social Care (HSC) Trusts.

The statistics presented in this bulletin are derived from Child Health System extractions provided by each of the five HSC Trusts to the Public Health Agency (PHA) and Community Information Branch (CIB) within the Department of Health (DoH).

Methodology

This information collection identifies if a health review has taken place within the accepted time for that visit. Each visit’s accepted time/tolerance is set out in the introduction of this report. All reviews whose accepted timeframe ended during the quarter is included. The contact itself may have been carried out in a previous quarter. This report therefore identifies whether the child received the contact within agreed time frames and is not an indication of workload during the quarter. Please note that if a contact occurs more than three months after the end of the relevant timeframe period it will be recorded as “not completed”.

Please note that the reports these figures are taken from are based on individual HSC Trust’s Child Health Systems. If a child had its review in one HSC Trust and subsequently

moved to another HSC Trust, the review may not be recorded on the IT system of the latter HSC Trust, and as such will be on the report as 'Not seen'. This is a recording issue for all the HCHF reviews.

Statement of Administrative Sources

Returns are derived from the Child Health System, which is the main administrative system used to support HSC Trusts in delivering the Child Health Promotion Programme.

Rounding Conventions

Percentages have been rounded and as a consequence some percentages may not sum to 100. A figure of 0% may reflect rounding down of values under 0.5%.

Data Quality

In 2015, a bespoke report was written to ensure the same health visit data was extracted from the local Child Health Systems (CHSs) by all five HSC Trusts.

To facilitate the return of accurate counts, HSC Trusts supply returns three months after the end of the quarter. Statistics published do not reflect information system updates after this window has passed. Following submission to CIB, further checks are carried out to verify that information is internally consistent. Trend analyses are used to monitor variations and emerging trends.

Queries arising from validation are submitted to HSC Trusts for clarification, and if required returns may be amended and/or re-submitted.

An audit (2017), carried out by CIB in cooperation with HSC Trusts and PHA, assessed the validity of the information at the stage of data input into the CHS. This audit, which focussed on the New Baby Review and the 2 Year Review, found that some Trust variation exists in recording. The full audit report with recommendations can be obtained by request to cib@health-ni.gov.uk.

User Engagement

We welcome your feedback. If you have any comments on this publication, please contact the Community Information Branch at: cib@health-ni.gov.uk.

Next Release

"Healthy Child Healthy Future – Visit statistics for Northern Ireland 2026/27" has a provisional release date of October 2027.
